Pobierz GIF Maker  
APK

We all love GIFs, don't we? Small funny moments or expressions, captured in the form of a GIF, can be an amazing way to communicate. And no doubt they are so popular around the world, especially among the youth. Their popularity can be understood from the fact that both the popular mobile operating systems of the world, iOS and Android, provide native ways to search and send GIFs. While Apple provides this feature in its iMessage app, Google has baked this functionality into its Gboard keyboard app, which is available both on Android as well as iOS. Apart from this, there are also many online GIF repositories like GIPHY which have a huge collection of amazing GIF photos. They even provide native apps for your smartphone to search and download these GIFs. Although we have the options to search for GIFs online, many times we think of having the ability to create our own GIFs. After all, the existing ones must have been created by someone as well. If you too have such thoughts, and are looking for ways to create your unique GIFs, then you have reached the right place. In this article, we will tell you how you can create your own GIFs from photos as well as how you can convert a video to GIF very easily on your Android smartphone. Part 1. What is a GIF? Before we dive deeper into how we can make our own GIFs on Android smartphones, let us first understand what a GIF is. GIF is basically an image format, just like JPEG and PNG. The only difference between this format and the others is the fact that a GIF contains many images playing like a video, but in a loop. In simpler terms, a GIF is basically an animated image. There are multiple images that play through. It's like a small video but on a continuous loop. With the explanation of GIF out of the way, here are a few ways you can create your own GIFs. Part 2. How to Make a GIF on Android? Option 1. Create GIFs from Images Since a GIF is basically a group of photos playing in a loop, you can create a gif from your own photos. However, to create a GIF from photos, you need multiple images of an event. Suppose you have taken multiple images of an event using the burst shot feature found in the smartphone cameras. Every image will be differing from the previous one slightly. Such images are perfect for creating a GIF. Tip: You can capture the perfect photos with the Best Face Filter Camera for Android. There are many Android apps found in the Play Store which allow users to make GIFs from images easily. All the user has to do is to select the images he/she wants to feature in the GIF and then click on create button found in the app, and it's done. It is that easy to create a GIF from your own images using your Android device. Option 2. Create GIFs from Videos We all know that GIFs are basically a form of video only, so videos can also be used to create a GIF. There are multiple apps in the Android Play Store that offer this functionality. Basically these apps extract frames from the video and then use them as images to create the final GIF. The rest of the process is similar to how a GIF is created using photos. So you can make a custom GIF by using a Youtube video or a video recorded by yourself. Part 3. The Best "Video to GIF" Maker Apps for Android The Android Play Store has numerous apps that allow the creation of GIFs from both images and videos. Here, we list down some of the best apps, and our personal favorites, for this purpose. 1. GIF Maker - GIF Editor It is one of the most popular and highly rated GIF maker apps on the Play Store. It is very feature packed. It allows you to make GIFs from photos as well as video. You can add up to 200 photos to create a GIF. You also have the option to add text, stickers, smileys etc. Once created, it offers you various sharing options. You can either share to your gallery or social media like Facebook, Twitter etc. You can also share it to the free online GIF repositories like GIPHY. 2. GIF Maker, GIF Editor, Video Maker, Video to GIF This is one of the best GIF making apps you can find on the Android Play store. Its super high ratings are a witness to this fact. It is an all in one free GIF application. You can use it to make/edit Free, Clear, Easy, Fast, Smooth, no watermark Animated GIFs. It has an easy to use and beautiful interface but it doesn't mean that it skimps on any features. It provides a ton of powerful features like - video to GIF, images to GIF, GIF editor, GIF camera, Compress GIF, rotate GIF, resize GIF, crop GIF, trim video to make GIF, trim GIF, beauty filter, beauty frame, over one hundred sticker, etc. Definitely it is one of the best options available on Android for creating GIFs. 3. DU GIF Maker: GIF Maker, Video to GIF & GIF Editor The last GIF creation app in our list is the DU GIF maker. DU GIF Maker is a free GIF maker and editor for Android. Using this app, you can easily create clear, smooth animated GIFs with small file sizes. D U GIF Maker is easy to use but packs powerful features like - video to GIF, images to GIF, GIF editor, GIF keyboard, GIF camera, GIF recorder, and more. You can make all kinds of GIFs using this app, such as animated emojis, reaction GIFs, and funny GIFs. There are a ton of sharing options as well. In addition to saving in the gallery, you can directly share on your social media or messenger apps like whatsapp and facebook messenger. Final Thoughts Thanks to the smartphones and the amazing and powerful smartphone apps, GIF creation has become very easy. All you need is a video or set of images and you can easily make your own GIF. And we hope our list of Android GIF maker apps will be helpful to you in creating awesome GIFs. And if you have captured something really funny and shareworthy, your GIF might just go viral amongst everyone in the world. Online "visual" reactions have come a long way since the first sideways smiley-face emoticon appeared four decades ago. Animated GIFs — those files showing a few seconds of choppy motion, like the one of Kermit the Frog flailing his arms excitedly — are ubiquitous in text messages, online forums and chat apps, thanks to the internet's meme culture. But animated GIFs don't have to come from the internet. You can make your own GIFs from the photos and videos on your phone. And you may not even need extra software to do so. Here's a guide. A Bit About GIFs While they resemble short video clips, animated GIFs have technical differences from videos. Both file types use a series of images to display motion, but GIFs don't include audio, hence the captions you see on some of them. And the traditional GIF format (which dates to 1987) supports only 256 colors, which are far fewer than many modern video formats — and even newer competing image formats like AV1, also known as AVIF. Most GIFs are a few seconds long, play automatically on a loop and have joined emojis as versatile ways to express yourself online. And GIFs are image files, which can make them easy to share in mail and messages. Some message and keyboard apps even include a GIF library for quick access in your conversations. (What is less clear about GIFs is how you pronounce the acronym. Like the peanut butter brand, or like "gif" without the I? The choice is fraught.) Create a GIF With iOS Third-party programs are plentiful, but before you head to the App Store, you may be able to whip up a GIF with programs already on your iPhone or iPad. For example, if you've captured a worthy shot with Apple's Live Photos feature (which records the action 1.5 seconds before and after the picture) you can add effects and save it as an animated GIF. Just go to the Photos app, open an image from the Live Photos album and tap the gray Live icon in the upper-left corner to add an effect like Loop or Bounce. To convert the live photo to a GIF, open the iOS Shortcuts app for automating actions, or get it from the App Store if you don't have it already. Search the Shortcuts Gallery for the Make GIF shortcut and add it. Tap the Make GIF icon and select your live photo to convert. The Shortcuts Gallery also holds a Convert Burst to GIF automation that you can use to transform a series of photos taken in burst mode and another, called Video to GIF, that converts video clips. Create a GIF With Android Options for making animated GIFs from photos on an Android-based phone can vary based on the hardware, software and carrier in the mix. Those with certain Samsung Galaxy phones may be able to use the GIF-making features for photos and videos in the free Gallery app. If you use Google Photos on Android (or iOS), you can make an animated GIF from a selection of your pictures. Just tap Library, then Utilities and Create New. Choose Animation, select the photos and tap Create. The burstlike "motion photos" captured on some Google Pixel phones can be converted into animated GIFs right on the device or with a third-party app. (Many Samsung Galaxy phones have a similar "motion photo" feature.) For example, to make an animated GIF on a Google Pixel 4 XL, open Google Photos and select an image saved as a motion photo, or use the search tool to look for "motion photos." (The Camera app's settings need to have the Top Shot or motion setting enabled.) When you find a motion photo you want to use, select it and swipe up or tap the three-dot More menu in the top-right corner of the screen. Next, swipe along the row of icons to Export. Tap Export and select the GIF option to save the new file to your photo library. Use a Dedicated GIF App The free tools that came with your phone can quickly create a simple GIF, but if you want to add text, have more control over looping or even browse GIF archives for ideas, visit your app store. Many GIF-creation apps are available, and the free Giphy software for Android and iOS is one of the best known. Giphy also has a huge archive of animated GIFs, its own GIF-making tutorial and a best practices guide. If you find Giphy overwhelming, you have plenty of other choices. Many apps are ad-supported but charge a few dollars to ditch the advertisements. They include ImgPlay (for Android and iOS; \$8 or less); Video to GIF (iOS; \$2) and GIF Maker GIF Editor Pro (Android; \$3). You can even make a GIF out of a selfie clip for a truly personal reaction shot — or just have fun with relatable animal behavior.
