## Heart Failure and Cardiomyopathies

### CHEMOTHERAPY-INDUCED CARDIOMYOPATHY: ANTHRACYCLINES AND TRASTUZUMAB REQUIRE DIFFERENT APPROACH TO MONITORING AND PREVENTION

Poster Contributions  
Poster Hall, Hall F  
Sunday, March 17, 2019, 3:45 p.m.-4:30 p.m.

Session Title: Heart Failure and Cardiomyopathies: Clinical 4  
Abstract Category: 13. Heart Failure and Cardiomyopathies: Clinical  
Presentation Number: 1284-509

Authors: [Maya E. Guglin](#), [Roy Tamura](#), [Lauren Bello-Matricaria](#), [Angelina Fink](#), [Jeffrey Krischer](#), [Pamela Munster](#), University of Kentucky, Lexington, KY, USA

**Background:** Trastuzumab is a highly effective drug for breast cancer, but it is cardiotoxic, especially if used after anthracyclines. Monitoring of left ventricular ejection fraction (LVEF) is required. Several studies found benefit of angiotensin converting enzyme inhibitors and beta blockers for prevention of cardiotoxicity.

**Methods:** In a randomized, double-blind, placebo-controlled, multicenter clinical trial, we recruited patients with breast cancer into two cohorts. The anthracycline cohort received with anthracyclines and trastuzumab. The non-anthracycline cohort received trastuzumab only. Within each cohort, we randomized patients to lisinopril, carvedilol, or placebo for prevention of cardiotoxicity. The study lasted two years (1 year of trastuzumab therapy and 1 year of follow-up). We analyzed changes in LVEF for each group.

**Results:** The study included 468 patients enrolled in 127 sites. In the anthracycline cohort, LVEF decreased in all three arms, with the largest decrease in the placebo group (see Table). In the non-anthracycline (trastuzumab only) arm LVEF did not change in the lisinopril group and minimally changed in other groups.

**Conclusion:** In patients with breast cancer treated with trastuzumab in a non-anthracycline regimen, monitoring of LVEF every 3 months is excessive and may not be necessary. Attempts to prevent cardiotoxicity are unjustified. In the anthracyclines plus trastuzumab arm, both monitoring of LVEF and pharmacologic prevention is reasonable.

Changes of LVEF on Anthracycline and Non-anthracycline regimen

Cohort	Group	Time	LVEF, % $\pm$ SD	P
Anthracyclines+Trastuzumab	Lisinopril	Baseline	64 $\pm$ 7	
		Endpoint	60 $\pm$ 6	<0.01
	Carvedilol	Baseline	62 $\pm$ 6	
		Endpoint	59 $\pm$ 8	<0.01
	Placebo	Baseline	61 $\pm$ 5	
		Endpoint	56 $\pm$ 7	<0.01
Trastuzumab	Lisinopril	Baseline	62 $\pm$ 6	
		Endpoint	61 $\pm$ 7	0.07
	Carvedilol	Baseline	63 $\pm$ 7	
		Endpoint	60 $\pm$ 8	0.01
	Placebo	Baseline	63 $\pm$ 6	
		Endpoint	61 $\pm$ 6	0.01

Journal citation reports (jcr thomson reuters-clarivate analytics) for the year 2019. 2019 journal citation reports (jcr) pdf. Journal citation reports (jcr) 2019.

View the relationship between article and journal citations with visualizations and linked data alongside descriptive open access statistics to understand the relative contribution of open access articles to a journal's overall volume of content and citations. According to the Web of Science group, this release "aggregates the meaningful connections of citations" that the research community has created via "the delivery of a rich array of publisher-independent data, metrics and analysis of the world's high-quality academic journals." Here are some of the highlights from the 2019 JCR as reported in the Clarivate Analytics press release: The report covered 11,877 journals from across 81 countries 283 new journal titles were added to the report, 138 of which are fully open access. The JIF of 64% of the journals covered in the report increased. The aggregate JIF increased in 90% of the 236 research categories. 17 journals were restricted from the report after investigations revealed abnormal citation behavior. Three new categories were added to the report: Quantum Science & Technology (SQIE), Development Studies (SSCI), and Regional & Urban Planning (SSCI). The latest update involves the redesigning of the journal profile pages that were added in the previous year's edition. Journal Citation Reports™ (JCR) provides you with the transparent, publisher-neutral data and statistics you need to make confident decisions in today's evolving scholarly publishing landscape, whether you're submitting your first manuscript or managing a portfolio of thousands of publications. Transparency Offering you far more than just a number, Journal Citation Reports journal profiles summarize a journal's place in the network of scholarly communications so that you can make better informed, confident decisions. Commenting on the significance of the JCR, Keith Collier, managing director for publisher services at the Web of Science Group said: "Publishers, librarians, researchers, and others depend on the JCR to track specific titles, inform the maintenance of journal collections, and identify the best-fit journals in which to publish." He further added that the JCR team selects and curates journals meticulously, and that the editorial vigilance and quality control over data integrity and development of new measures makes JCR "an essential resource." To read the detailed report, visit Journal Citation Reports website. Related reading: References: You're looking to give wings to your academic career and publication journey. This level of transparency allows you to not only see the data, but also see through the data to a more nuanced consideration of journal value. Learn how Journal Citation Reports can help your organization assess the world's leading science and social sciences journals. Quickly understand a journal's role within and influence upon the global research community by exploring a rich array of citation metrics, including the Journal Impact Factor™ (JIF), alongside descriptive data about a journal's open access content and contributing authors. We like that! One click sign-in with your social accounts 1536 visitors saw this today and 1210 signed up. Please send your query to us on [insights@editage.com](mailto:insights@editage.com) and we will respond soon. Read our Editorial expression of concern. We're making improvements to this page, so you may not be able to complete this action. Quality control Web of Science™ monitors and excludes journals that demonstrate predatory behavior; journals in Journal Citation Reports are subject to additional analysis to detect abnormal citation activity. Citation frequencies for individual articles are quite varied. Journal Citation Reports now includes more article-level data to provide a clearer understanding of the reciprocal relationship between the article and the journal. The other developments include new graphs to track a journal's percentile rank in a category by JCR year, a breakdown of a journal's "Uncited Items" per article, and the ability to view cited and citing journal data, along with a summary of key indicators and a graph representing the metric trend. Selectivity Researching which journals to submit or subscribe to can be time consuming. Web of Science does not depend on the Journal Impact Factor alone in assessing the usefulness of a journal, and neither should anyone else. Again, the Journal Impact Factor should be used with informed peer review. The JCR help measure the impact and influence of academic journals with the help of a combination of metrics and indicators like the Journal Impact Factor (JIF) and citation data from the Web of Science database. Objectivity In order to make good decisions, you need information that you can trust. The Journal Impact Factor should not be used without careful attention to the many phenomena that influence citation rates - for example the average number of references cited in the average article. The Journal Impact Factor should be used with informed peer review. Contact us Popular This article is in Clarivate Analytics released the 2019 Journal Citation Reports (JCR) on June 20, 2019. Each journal profiled in the Journal Citation Reports has met the rigorous quality standards documented in the Web of Science Core Collection editorial selection process so that you can quickly find a list of the most influential journals in your field. Journal Citation Reports is the only journal report of its kind produced by publisher-neutral experts, providing you with unbiased journal statistics trusted by over 9,000 institutions worldwide. Journal Citation Reports journal profiles aggregate publication and citation data sourced from the Web of Science Core Collection™, the world's original citation index for scientific and scholarly research. In the case of academic evaluation for tenure, it is sometimes inappropriate to use the impact of the source journal to estimate the expected frequency of a recently published article. Journals displaying evidence of excessive self-citation and citation stacking are suppressed from Journal Citation Reports to ensure the integrity of the reports. Additionally, the redesigned profile page will allow publishers and other users to link to the profile page directly with the help of an improved Article Match Retrieval link service.
