Operation Principle

The UPS adopt digital control and bring PWM sine wave and control signal. Using 50KHz IGBT high frequency isolation conversion technology, to fulfill isolation without extra transformer, it considerably reduces the size and weight of UPS. The inverter consist of double circuit-loop protection circuit, strong ability of anti inrush and short-circuit acceptable.

Intelligent automatic file-saving

- By using the key user configure himself in MS-DOS Mode to save and exit programme.
- Close programme and automatically save the files in Windows Mode.
- By using the key user configure himself in Dos with Windows as background to save and exit.
- Check closed programme name and files-saved when close Windows the last time.

Electrical

Input

- Phase/wiring: Single phase 2 wiring +G
- Voltage: 230V, 220V ±20% or 115V, 110V ±20%
- Frequency: 47-63Hz
- Input current: Similar as sine wave, Conform with IEC 1000-3-4.
- Input current(A): 50% less than that of traditional.
- Energy-Saving: Input current is 10% less than that of output (PC load).
- Going with generator: Same capacity as UPS.
- No electricity net pollution: No harmonic to delivring net.

Output

- Phase/wiring: Single phase 2 wiring +G.
- Voltage: 230V, 220V or 115V, 110V with ±10% adjustable.
- Wave form: Sine-wave, <3% THD.

Battery

- Type: SLR can back UP over 8hrs with external battery.
- Recharging time: 8hrs up to 90%.

Protection

- Battery: Low battery switch off and battery Breaker.
- Short-circuit: Auto current, limit. Switch off inverter and breaker in case over duration.
- Over-Load: with 120% load, transfer to bypass feed after 25 seconds over-load.
- UPS abnormal: Auto transfer to bypass feed.
- Over temperature: The UPS transfer to bypass feed if the temperature of key parts Auto transfer back Inverter mode when temperature come down 60°C.
- EMI Filter: 10-100KHz-40db, 100KHz-100MHz-70db.

Interface: With built-in DB9, RS232 and SNMP (Option). Ports communicating with computer offer intelligent monitor function.

Ambient conditions

- Temperature: 0-40°C
- Moisture: No condensing UP is 95%.

Other specifications

| Model | Capacity (kVA/VA) | Weight (kg) | Net Weight (kg) |
|---------|-------------------|-------------|-----------------|
| GP6500H | 1KVA / 1450VA | 13.7 | 14.5 |
| GP6500S | 1.5KVA / 2175VA | 18.5 | 19.5 |
| GP6500M | 2KVA / 2900VA | 24.5 | 25.5 |
| GP6500L | 3KVA / 4350VA | 34.5 | 35.5 |
| GP6500H | 4KVA / 5800VA | 44.5 | 45.5 |
| GP6500L | 6KVA / 8700VA | 64.5 | 65.5 |

Electrical Specifications

PC-mate

Mini-PC-mate UPS, full plastic case(Grey, Blue, Black color option), high looks, suit for PC, printer, fax and telephone etc.

LAN-mate & HO-mate

LAN-mate UPS can be connected to Novell, Windows, Windows-NT, Unix, LAN Manager, etc. Suitable for auto on/off and saving file. Safeguard your Internet. HO-mate (Long backup time model) UPS Inverter, suit for PC, home appliances, TV set, fluorescent lamp and fan, etc.

ATM-mate

Design for ATM (Auto Teller Machine). Built-in battery, independent back-up 4 hrs. Time tested for home & abroad market.

- CPU Control**
Controller adopts advanced computer technology, increasing MTBF.
- High MTBF**
Advanced circuit design, quality components, high MTBF up to 25,000Hrs.
- Protection**
Smart protection for precision device: CAD/CAM workstation, Unix/Windows-NT/Novell Network Server, Dos and Telecom system, etc.

- Input**
 - Frequency: 43 - 67Hz
 - Voltage: 150 - 275V or 75 - 137V(-23% - +25%)
 - Working voltage: 0-450V
- Output**
 - Frequency: 50Hz or 60Hz ± 1Hz
 - Voltage: 230V or 115V, ±10% adjustable.
 - Waveform: Sine wave in normal.
 - Crest ratio: 3:1
- Battery**
 - Type: Sealed maintenance-free battery, refer to the Battery Discharging Time Table
 - Charge time: Smart charger up to full level in 2 - 5hrs.
 - Long backup time model: External battery, built-in 6A charger.
- Protection**
 - Battery: Low voltage shutdown & fast fuse.
 - No-load: Auto-shutdown and auto-restart up UPS when the utility recover again.
 - Overload: Current fast fuse, Mains fuse.
 - Short circuit: Electronic circuit protection & fast fuse.
 - EMI Filter: Comply to EN55022 CLASS-B
 - Over-discharging: UPS auto-shutdown, after batteries discharged 30 sec.
 - Telephone protector (option): Comply to Telecom Lightning Surge Standard.
- Indicators**
 - Mains normal, battery on charging (yellow).
 - Online operation (green).
 - Battery operation (red).
- Alarms**
 - Main fails: Alarm every 6 sec.
 - Battery approaching low voltage: Alarm every 1 sec.
 - Low battery: Long beep.
 - Inverter short-circuit or over-load: Long beep.
- Communicate interface**
 - RS232 interface(option): Use in any open PC
- Environment**
 - Temperature: 0-40°C
 - Humidity: Up to 95% noncondensing
- Dimensions & Weights**

| Model | Dim.(mm)(W×H×D) | Wt.(kg) | Model | Dim.(mm)(W×H×D) | Wt.(kg) |

How to reset t9 android box. T9 android box boot problem.

Not sure if anyone can help with this. I have a T9 can, sometimes the sound is ok and sometimes not. Sometimes the voices are clear, sometimes muffled. I use both the built-in player and the MXPlayer/VLC player. However, sometimes it changes even during playback. I'm not sure if this is purely due to the box or other issues. I understand these boxes are cheap for what they do and I have no problem buying a better box if need be. Any tips would be great. Thanks Duplicate post #mods delete please # Last Modified: 10/27/2020 Not sure if anyone can help with this. I have a T9 can, sometimes the sound is ok and sometimes not. Sometimes the voices are clear, sometimes muffled. I use both the built-in player and the MXPlayer/VLC player. However, sometimes it changes even during playback. I'm not sure if this is purely due to the box or other issues. I understand these boxes are cheap for what they do and I have no problem buying a better box if need be. Any tips would be great. Thanks, I have a similar T95max Chinese clone but with Allwinner H6 chipset. I think T9 you have a similar box but with Rockchip RK3318 it's slow and even behind Android Oreo 8 so updating to Android 9 Pie won't solve your problem. There are several versions of the firmware for this box, but the main problem (with all these Chinese clones) is finding a firmware that will fix your audio/video issues while also matching your box's Wi-Fi/Bluetooth chip. This is a common problem faced by most people. You try to update the firmware only to find that you lose Wi-Fi or remote work. I have an Aeromedia Nanomax (T95max clone) that had the same issues as your T9. Mines was an Allwinner H6 chipset that comes with Android 9. I had to upgrade to Android 7.1.2 Nougat just to fix audio issues and big temperature issues. I'll ask and see if it's better. Not sure if anyone can help with this. I have a T9 box, sometimes the sound is ok and sometimes not. Sometimes the voices are clear and then muffled. I use both the built-in player and the MXPlayer/VLC player. Well, sometimes it changes during playback too. Not sure if it's completely in the box or other issues. I realize these boxes are cheap for what they do and have no problem buying a better box if needed. A few links would be great. Thanks, I have a T9 box, sometimes the sound is ok and sometimes not. Sometimes the voices are clear and then muffled. I use both the built-in player and the MXPlayer/VLC player. Well, sometimes it changes during playback too. Not sure if it's completely in the box or other issues. I realize these boxes are cheap for what they do and have no problem buying a better box if needed. A few links would be great. Thanks, I have a similar Chinese T95max clone but with Allwinner H6 chipset. I think the T9 you have is a similar box but with the Rockchip RK3318 it's slow and laggy even on Android 8 Oreo so updating to Android 9 won't solve your problem. There are several versions of the firmware for this device, but the main problem (with all these Chinese clones) is finding a firmware that solves the audio/video problems, but also to the Wi-Fi/Bluetooth chip, the stock remote control, okay. This is a common problem that most people face when trying to update firmware only to find that they lose Wi-Fi or remote functionality. I have an Aeromedia Nanomax (T95max clone) that had the same issues as your T9. Mines was an Allwinner H6 chipset that came on Android 9. I had to downgrade to Android 7.1.2 Nougat to fix sound issues and major heat issues. I'll ask and see if it gets better available for your device when you are ready to flash it? However, you are limited by what those crappy processors can actually support and handle, so you may need to consider a better box that can handle more modern software/apps. Last edited: 27 Oct 2020 Not sure if anyone can help with this. I have a T9 box, sometimes the sound is ok and sometimes not. Sometimes the voices are clear, sometimes muffled. I use both the built-in player and the MXPlayer/VLC Player. However, sometimes it changes even during playback. I'm not sure if it's entirely due to the box or other issues. I understand that these boxes are cheap for what they do and have no problem buying a better box if the need arises. Any advice would be great. Thank you Cheap chinese android box from the bay is a problem. Do yourself a favor and grab a fire stick and that won't happen. Thanks for the replies, I have to admit I'm not familiar with Firesticks, but I like the idea of Android Boxes and software available from the Google Store. When it comes to apps, the situation is the same with the Firestick. Are there IPTV apps, apps like Smarters, XCIPTV, or do they have their own versions? Whether Amazon continues to harass you by providing the product, I've heard a lot about it and I have no problem buying it if it offers the same ease of use and affordable apps. Many Thanks. Yes Android boxes are great, I'd grab one over a Firestick any day of the week even if Rockchip based devices suck. Android boxes are great for storage, while Firestick limits you to around five gigabytes (Fireos uses some of the storage) then you'll need to start adding otg to store your apps, and if it's unrooted and debloated tends to it tends to delay and work slowly. If you've been thinking about a Firestick, you should go for the 4k Amazon FireTVstick. No amazon will give you trouble, you can block all amazons with different launcher unlike amazon sponsored apps on home screen. On the other hand there are Allwinner/Amlogic devices, mate: t95 Android 10 is ok, with a little modification it works just as well as more expensive boxes on the market like Beelink and Mi Box. Just add your own launcher, and change the web view to Bromite, install Adaway and it should be fine. If you're willing to spend a little more, the nvidia Shield Pro is your best bet for Android TV. I had a few Android boxes but I threw them away and bought 4K Fire Sticks, the boxes had constant issues and nits, one of the main ones was the audio sync. The sound was never muted, it was something with the TV speakers or externally, I had a lot of problems with the HDMI cec on one box. Have you tried switching between hardware and software decoding, try a different HDMI cable as well, or just try reinstalling the cable. Are you going through the HDMI switch block... if so, try excluding the switch directly on the TV. We have good news, there is a new firmware (V9 .img file for PC flash method) for T9 TV Box with 4GB RAM (20181228) based on Rockchip RK3328 SoC. That's a big plus for the manufacturer responsible for the T9 TV box, and good news for all who do itBuy T9 Android TV Box. If anyone is undecided or still planning to buy, the T9 RK3328 TV Box is already available on Gearbest for \$43.99 (4GB/32GB) and on Geekbuying for \$66.99 (4GB/64GB). For those who haven't had the chance to test the T9 Android TV Box yet, here are its specifications: Chipset - Rockchip RK3328 Processor - Cortex A53 Quad-Core 64-bit 1.5 GHz GPU - Penta-Core Mali-450 Up to 750 MHz+ Memory - 4 GB RAM Memory DDR3 - 64 GB eMMC Flash + Micro SD card (up to 64 GB) Video and audio output - HDMI 2.0a up to 4K @ 60 Hz with HDR10 and HLG support, optical SPDIF, video codec - 4K VP9, H.265 and H.264, 1080p VC-1, MPEG-1/2/4, VP8/8 Connectivity - 10/100M Ethernet, dual-band 802.11 b/g/n WiFi, Bluetooth 4.1 USB - 1 USB 2.0, 1 USB 3.0 Other & IR receiver, power indicator Power 5V/2.5A Dimensions 10.50 x 10.50 x 2cm Weight 200g Firmware (new version V9) is available as image file. Assistant driver 4.5. Download New Firmware (V9) for T9 TV Box based on Rockchip RK3328 SoC (20181228) here. Are you a movie fanatic and tired of watching your favorite series on the small screen of your laptop? While we always have our favorite Astros, sometimes they just don't have that one international show you really want to see on the big screen. Enter Android TV boxes. These small devices (usually no more than 5 inches wide and/or long) act as streaming devices running Android. This means they can run Android apps (Think, Games, News and TV apps) by projecting them to your TV via HDMI. Most TV boxes usually come with a selection of free and paid apps. The T9 set-top box is no exception. In fact, it is one of the best Android TV boxes in Malaysia. For our own benefit (and that of our readers) we decided to get one and see what happens. Here is our briefWhat's in this body? T9 Android TV Box Quad-core processor, Cortex A53 Memory 4GB RAM / 32GB ROM GPU Processor Mali-450MP2 RK3328 RAM Type DDR3 Battery x2 AAA battery (remote control) Weight 0.2kg Operating system Android 8.1 Oreo The setup of the TV, such as You know, is a bit complicated to use compared to Chromecast, another streaming device. However, the T9 makes it easy for itself. After opening the packaging, you will find instructions that briefly explain how to operate the TV box. To get started, all you need to do is connect the T9 to your TV using an HDMI cable. Remember to put a couple of AAA batteries in the included remote control. Then switch the TV to the HDMI channel and turn it on with the included remote control. From here you can see the T9 menu. Enter your internet data and that's it. It's ready to play! What can it offer? At first glance, the menu appears to be similar to the Android TV menu (not really surprising). You'll find your trusted Google App Store and popular video apps like YouTube, Netflix, Hypp TV and Prime Video. There's also the Chrome browser and RedBoxTV, which hosts exclusive national shows like UK broadcaster Fox and Disney. The T9 also offers 4K Ultra HD picture support as long as your line is stable. Thanks to the quad-core processor (Cortex-A53) and 4 GB RAM with 32 GB ROM, you will hardly feel any lag when working. At least not us. What was it like using the T9? In this test, we used Popcorn (similar to Kodi) as our streaming app. I'm happy to report that everything is easy and convenient. Also, we found very few ads while streaming, which is a big plus as the ads can be very annoying for many people. Also, we had no trouble streaming most of the shows. However, we have encountered streaming issues with programs that are only available in your country. Even if it was just a minor issue, these channels would be fun to stream. Maybe that's where the built-in VPN comes into play (which we were too lazy to use). "This link cannot be restored because of a network error." Not to mention that while HD support is available, we found many programs to be low definition. However, this will be canceled once you access the HD version. Of course, not all channels have the version listed. We realized that a huge problem with T9 (and perhaps TV receivers in general) is the lack of optimization. As Android is an open source system, not all applications are properly optimized and displayed on the TV. This Android device is quite complicated to navigate. If you switch back to the included remote, you can switch between the arrow mode (default) and the mouse mode, which will still be used as the default navigation mode. Arrow mode (default) Mouse mode At first, it was painful for our fingers to navigate Popcorn as the remote control does not always respond to commands. We also tried using a USB mouse for navigation but found it didn't work. But over the next few days, we finally learned how to trade between Default Mode and Mouse Mode. This makes it easier for us to navigate without getting frustrated by one mode at a time. Since there are no TV-optimized apps, some buttons and options may not appear on the screen. For example, the "Watch Now" option has disappeared due to the length of the popcorn summary. Left: where is it? / Right: Right where it should be. After-sales support As the T9 is not sold in local stores, the need for customer support for such a device is understandable. We will inform you that after-sales support is available if you purchase from our preferred retailer listed at the end of this article. If you discover a defect in the set-top box within 3 months, you are entitled to a replacement. Conclusion The ease of use was easy; everything is simple and easy to use. Of course, if you've used the TV before, it is also very easy to set up with little or no hassle. Certainly yesNot that the apps aren't properly optimized. For this reason, some applications may not work fully. This leads to difficult navigation. We believe that televisions still have a long way to go if they are to have a lasting impact on our lives. Those who like to watch their shows on the big screen and use a lot of streaming apps like Popcorn or Kodi will love the idea of the T9 Android TV box. The T9 is easy to use and not bombarded with ads once you get the hang of it. management.
