Anno 2205 space station layout. Anno 2205 space station.

Anno 2205 > General Discussions > Topic Details help with orbital station layout please anyone know of any tutorials or guides to orbital station layouts? finding it very difficult to provide all requirements to each workshop as well as keep the temp low enough Note: This is ONLY to be used to report spam, advertising, and problematic (harassment, fighting, or rude) posts. anno 2205 orbital layout This is a topic that many people are looking for. newyorkcityvoices.org is a channel providing useful information about learning, life, digital marketing and online courses. it will help you have an overview and solid multi-faceted knowledge. Today, newyorkcityvoices.org would like to introduce to you Anno 2205 - Orbital Station - Guide/Introduction. Following along are instructions in the video below: Anno 2205 - Orbital Station - Guide/Introduction Leave your comments to let me know what you think and what you want to see. Anno 2205 is owned by Ubisoft/Website: ♠♠ anno 2205 orbital layout-0 All righty everyone this is sleep on the wind here and i'm going to introduce you to the orbital space station. This was added as part of the dlc here um. It is hhm how do i want to put it it's an interesting idea. But underwhelming as far as i'm concerned so what's poppin. I've prepared the orbital station for your arrival expansion can begin. Whenever you're ready wow. Thanks adam prepare for boarding. This is adam. He's an upgrade from father and hopefully i can get him to do it again. But he'll start being crazy like father um. So let's let's go ahead. And take over this section. Here and welcome to the orbital station yay new owner is testing because this is our testing account welcome to your corporate orbital station. You are free to expand it in order to pursue scientific research. Only possible in zero g. Enjoy your stay. I'll be on standby to advise you take note. The station can be expanded to pursue various types of research sequential process started yay alright so the first thing i'm going to do i'm doing biology so we're gonna pop down agricultural chambers working condition array research now possible so now we're going to open up technology shion's required. And it'll tell you right here. It's like port and export are the alpha and omega of business success. Thanks good for you so in this expertise here. Which is generated here are their increased by everything here so like this orbital station requires greenhouse solar cells and artificial gu lab its optimal temperature is between zero goods or i sorry in between twenty and thirty nine degrees celsius. So with that being the case um. That's where you got to get tricky with the building. Here and here's the thing that i find underwhelming when they first talked about this. I thought this was going to be an exponent experiment with 3d building. So. I was hoping to be able to take my lovely little connector here. And do a three dimensional build on it so we would have to do 3d space building. anno 2205 orbital layout-1 That is not what they did they did their standard top down 2d setup. Which is very very unfortunate as far as i'm concerned so that that is life um. Basically. If you look down here. There are five different modules each one requires so we got three different types of astronauts. We have biologists which come from the temperate zone. We have physicists which come from the arctic zone and we have engineers which come from the moon. So you know we have to unlock those areas in order to get that stuff if we pop into the technology. Nexus here welcome to the technology. Nexus as a data amalgam and this provides you with an overview on all orbital research. Please choose. Which research projects to commission thanks adam actions required thanks adam please shut up alright. So we only have one ability which if you look at it increases productivity in agriculture sil ds. By 10 percent further actions were so hired yeah. It's been implemented good for you well. That's not what i want to do then again. I see you most of the time. Adam you need to shut your piehole at this point. So you notice. It is now doing these ones here which increase orbital module kits by 10 in order to orbital link kits. By 10 and each one of these five branches has additional ones next to it now the maximum amount of modules. You can get is 12 wait. 12 2. 4. 6. 8. 10. Wait a minutes not right. 12 15. anno 2205 orbital layout-2 To see. Pam yeah. Because that's okay so two four six eight ten wait a minute something's off unless. Did they. Oh. No ok. So i still have one available ok yeah. 12 ok. 12. Is correct. She's okay. That was like this wait a minute um. So each one of these changes chains here is specified to a specific type. So they require is like look that requires agricultural chambers. One of two whereas this one requires a biotech complex. And this one requires an electronic cleanroom and so on so forth. So energy cluster and heavy industry hall. Now this heavy industry chain here. I find extremely useful as does absolutely nothing and the key thing on all these is going to be the final level. So you have like a 15 percent reduction in goods in all regions. You have androids and storage. Provide workforce. That's pointless to me here is the most important one i think 5 percent increase in production all facilities for corresponding 25 increase in energy maintenance. But that can be easily canceled out by this one here and this one here so you get a 5 percent increase for 5 percent. More energy which i'll take any day of the week. And that these levels here animal rights policy food design workshops use rice into the beef. So i can eliminate entire lines of production. Such as you hear greetings to my. Former lead engineer. anno 2205 orbital layout-3 The next time you attend the council thanks adam contacting. Her through the net is being next to impossible. So ah. So these onions. Like here. A cohesion plants use munites instead of tearing. That women ate the entire chain of having the ship deuterium up to the moon that's i mean. It's awesome also it's like this will produce 15 already in per minute this will make it a faster security reduction. This will add methane instructors also produce to tearing and uh 10 workforce increase 10 revenue gained and ton arctic tundra and lunar regions. That's kind of useful um and then i love that all residents produce energy. That's kind of interesting. So the key to this whole thing. It pop out of here is none of this cost money. And it also has to be built within this shield. But none of it cost money. Oh yeah. I cost graphite. Though. I forgot crap. Oh. Wait a minute. I take this back this does cost money now ha. I remember distinctly testing this in the orbital expansion. And it didn't cost any money okay. That's hhm working back on that that's actually a troubling prospect for the research now accessible because in order to do this you basically have to create and destroy a whole bunch of stuff because you have to go through all of these chains here in order to do this so you get full expansion on everything and then you get the full capabilities that you're actually looking for which is nice now this is interesting because i noticed it also requires yeah graphite these take iridium that's curious. I distinctly remember that not being a thing before so this has to be an update. Okay. This is making some sense than what they did okay. That's not a big deal. anno 2205 orbital layout-4 I will have to build up some rare earth and uh. There are some rare materials. Which actually now i think about it screw this uh. You yeah give me all that okay well. That's all my problem. Um. Introduction is insufficient. There we go so now these are running too high. Because they're too close to each other in fact. I don't even need this well i'll need that link but not right now hang. Yeah okay so that doesn't have okay. This is making some sense they want to stop the absolute abuse of all this you notice how i deleted that link and the temperature went down the distance. They have to travel does affect how it works so i'll go ahead. And do this. And do music. Green house. Green house house. It course is a nice surprise. Green house. So how may i be of service. Still not green house well this is a nice surprise well solar cells rise beware a vacuum is not yeah cooling system. I'm we're all system. Please shut your piehole alright. So they're overheating. Now so we need oh. Not that one that one so we pop that there there we go and the only thing they're gonna use the artificial glab which i currently don't have enough space to do what well technically. I actually might if i went ahead under this reduction is insufficient. Oh wait. I can't do that because. anno 2205 orbital layout-5 I okay. Yeah. No i don't have enough space. So. This is a you notice that increased their expertise. There so that really helped out and this will allow us to go in here nothing on fire or exploding at the moment and damn animal rights employees. So now my stuff will take it this one's kind of interesting. A rescue system instead of having support fleet john rafferty is called now in the weapons area. So that's always nice um joint venture rewards for assignments does not matter. But i'm selecting this strictly to get the additional workshops and get everything expanded here and this is a long long process these final ones look at us two hours they have to be active. It is a pain to do is it absolute pain to do this so i will what i will do here is i will go through get everything up and running everything unlocked and literally. It's just you destroy the stuff you create the stuff in order to unlock everything then again and then i'll come back. We stay at the time adam you need to shut your piehole um. Well your microphone. Whatever i don't care. So just take a long long time. And i'll come back once everything is basically once i'm in my stable layout at that point so once i'm in the stable layout and then everything's up and running good so i'll system like right now. I have a plus 10 to all my a bro cultural facilities. Which is nice and this will give another 10 in trading price and agricultural goods. Don't care increase in salvage don't care. Nobody cares frankly. I'll be this is well i'll have here because this is a must have i'll fully do this line here to the overclocking and then i'll do three on the energy. And that's what i normally do and the reason for that is exactly as i explained this gives me access to all kinds. I mean just 5 increases across the board. Where everything everything else adds. 10. So it's an additional on all those. Which is nice and the top tiers are really aren't that great except for this one here and kind of want this one here. But the fusion reactors. anno 2205 orbital layout-6 It does not matter um at all so basically as far as i'm concerned. This is the best one. But i will go ahead will expand out will get actually i have to get on the moon. I have to expand the arctic in order to get up here and do this properly and then i'm just going to spend a whole bunch of time at just letting these research at this point. So that's what we'll be doing and life will be fantastic. So i'll come back as soon as we're ready for that and welcome back to the orbital station and as you can see we have highly expanded. But not zooming in zooming out so we are at the maximum number of modules without using the cheats. Which apparently are cheats. Available that allow you unlock the maximum amount. So you knew all of them. So we take a look at our research here. Within acceptable limits. We have five electronic clean rooms. Which i know is this chain right here two biotech ones. Which is this one right here and i just noticed this is not selected don't know why not um. This one right here. Which allows for um biomedical labs use bio resin sets in cells. So you don't have to harvest algae in order to get rejuvenator. Which is awesome they also allow for the kinetic shield increased by 100 reduced by two costs doesn't matter i never use it anything on 50 increase in rewards from this corporation. Don't care doesn't matter. The electronic clean rooms. We get all these first ones are 10 increase in their respective areas now hardware family fabrication plant to use microchips into that qubit processors. Which is awesome because then you don't have to make qubit processors basically so that's just fantastic repair drone increased by 100 reduce fuel by 2 big whoop doesn't matter plus 50. Percent rewards doesn't matter at all. But then you get another 10 increase in the electronics factory. Which is your boss mit's is exemplary event. We have a lot of pressure it automatically produces this graphite suffering from looking at all those numbers. And then increase training prices trading prices don't matter at all i see my daughter styling empathise okay daughter was talking to me she finished her puzzle all by herself. So well done um anti g. anno 2205 orbital layout-7 Workshop. Additionally. Produces intel. Aware that is a fantastic thing. To have um oh faster security reduction. 5. Infection. Yeah. Doesn't matter that don't even care. I barely use those ten percent increase in revenue for 10 worker generation in the temperate regions. Which is fantastic. Because it gives you extra tax money and you're normally have so much extra work force it doesn't matter at all and then the final step in this one is the 5 increased production with a 25 increase in energy of all buildings. Which is fantastic. Because they'll just take that any day of the week at that point and because of that reason we then have three energy clusters in here. Which 10 increase in energy. Oh look auction off started yay um fusion is prepared fusion plants compares with new nights instead of deuterium that is your gel freaking fantastic removing entire prey my marriage in the stress you are and from you're looking at all those numbers doesn't matter so many buttons with just 86 billion neurons come on have my sympathies there we go missile barrage fires satellite artillery instead of missiles that's kind of cool actually i don't care if it doesn't increase or decrease in damage it just looks awesome um. Then we have another a 10 increase in i gotta buy this another 10 increase in which imma call it in energy here. And that is that now offsets us for 5 percent to 5 percent. Satisfactory. Oh nuts to you so it's a 5 increase to a 5 increase in maintenance and energy at that point. Which is it just 5 to 5. At that point. I'll turn energy into production. All the time well it's they don't get to both about dating time. I got that alright increased trading prices don't care obtain. 15. A radium per minute. So basically this one here and this one here are constantly generating iridium iridium and graphite so i mean. That's nothing you can say about that i mean this just generates rare materials you even. anno 2205 orbital layout-8 See these ticking up up here. Already so like there we go now. We added one so and then i fell out with two of the agricultural chambers. As you can see i don't care at all about these included drop their identity at all if you need pronouns to refer to me i recommend using these singular thing. Yes. They adam sure um. So you have ten percent increase in agricultural facilities. And then this. Big. One. Which is food design workshop uses rice instead of beef. Eliminating beef from the need to be produced. Which is awesome. Because you can use rice and rice you just stack so efficiently. It's not even funny um fifty percent increase in the rewards. I don't care and this is the one thing. I don't do support fleet. Now calls. John rafferty for help. Instead no point to that at all. As far. As i'm concerned i have the 100 increase in repair drones. Which i think we're here come here no this one yes repair drones and reduce fuel cost by two i hate there's no need for this guy to show up then none at all i mean all i mean all he does is wander around and repair. Things. He doesn't actually fight what like the sport polly does. There's no point to it. And that's so that's the reasons. I chose what i chose here in here. And i do like that you're restrictive a bit because it does force choice and more customization at that point to your place. anno 2205 orbital layout-9 Time your performance is exemplary at that point. As i stated. I think they missed a huge above the heck just happened okay. I think they missed a huge opportunity with not allowing this to be a three 3d building opportunity. Because i honestly when they were talking about this. I honestly thought that would that's what they're going to do and then in the next. A no you would end up having it would be like their experiment. Which ubisoft likes to do they put the previous game in the or the new game in the previous game um kind of thing. But they allow the experimentation and i thought this was going to be we're going to experiment 3d building because in the future. While you'll have islands and everything to build at they're going to be asteroids. And you have to build 3d space stations around asteroids and stuff. I'm kind of thing so i thought that's where they were going to go with it. But that is not the case. And as you can see here here is my current layout ah. The electronic. Honestly the electronics were the hardest. One for me here that was an absolute pain because they're the last ones. I did um basically you have to have three solar cells right next to one of them. And then you have to have artificial glab and a storage platform connected there with enough cooling to do it. And if you don't have this kind of layout. I got here this way just it's extremely difficult to do towards the end. Because you can't really waste anything at that point nothing at all so it's it was a pain um. And i think i don't know if somebody can't oh. Who knows i mean somebody probably came up with at first but whatever. But yeah. This is the orbital dlc here um as far as i'm concerned. It's actually a good addition to 2205 how given how weak 22 05. Is compared to the other a no games. I actually enjoy i enjoy what this is but again. I wish 3d building was going to be part of it. Because that would have been awesome um and for i should say i can see where there would be a problem. But i'm saying this is where we would experiment with it and see if they can do it right if they can do it right it'll be fantastic. So that is the orbital dlc whatever we pop on to next. I'll pop to next. I'm not even sure whether that's going to be might be the tundra might be wild water bay. It might be something else i don't know so i will see you guys for whatever. That's going to be music music you. Thank you for watching all the articles on the topic Anno 2205 - Orbital Station - Guide/Introduction. All shares of newyorkcityvoices.org are very good. We hope you are satisfied with the article. For any questions, please leave a comment below. Hopefully you guys support our website even more.
