**RATIONAL CHOICE THEORY AND RANDOM BEHAVIOUR****Abstract**

According to rational choice theory, rational consumers tend to maximize utility under a given budget constraints. This will be achieved if they choose a combination of goods that cannot satisfy their needs and provide the maximum level of utility. Gary Becker imagines irrational consumers who choose bundle on the budget line. As irrational consumers have an equal probability of choosing any bundle on the budget line, on average, we expect that they will pick the bundle lying at the midpoint of the line. The results of research in which artificial Becker's agents choose among more than two commodities rational choice theory is small. And in more than two budget/price situations show that the percentage of agents whose behaviour violate. Adding some factors to Becker's model of random behaviour, experimenters can minimize these minor violations and fit the actor's choice with the theory. In addition, the results of organizations' choices analysis show that the observed agents behave rationally, and this behaviour confirms the theory rational choice. Therefore, rational choice theory is unfalsifiable. As the theory can always fits with the facts, it would have been much more productive if we had admitted that the theory was falsifiable and then debated its explanatory value in specific circumstances.

**Key words:** rational choice theory, Becker's model of random behaviour, generalized axiom of revealed preference, falsifiability, utility maximization, rationality assumption.

Maia Pascual / Pixabay Ethics is the branch of philosophy that deals with morality and how behavior forms. Different branches of the study of ethics see where our views of morality come from and how they shape our daily lives. There are four main ethical theories: deontology (or duty), utilitarianism, rights and virtue. Each of these theories analyzes moral behavior in different ways. Deontology The theory of deontology states that when we have to make ethical decisions, our first thoughts are about our duties and obligations. According to this theory, what we believe our duties are going to boost how we act in different situations. For example, we can make a decision based on following the law or on our loyalty to friends or family members. If the greatest hole in the theory of deontology is that there is no standard for what the duties of the person and the obligations are. The philosophers who disagree with this theory believe that everyone's duties are different, so there is no way to know what drives a person to make a particular decision. Utilitarianism According to the theory of utilitarianism, people choose their actions based on how their decisions will benefit most people. Makes a decision that will be better for all those involved. There are two sides to this theory. Acting utilitarianism says it will make decisions based on helping others, while the ruler's utilitarianism says it will act without impartiality. Those who disagree with this theory believe that no one can predict the results, so we cannot know what the benefits of our actions will be. Compare the consequences can be difficult, so some philosophers say we can't make real utilitarian decisions. Rights The theory of ethics rights says that people take based on the rights that your society accepts. What most people in that society think is important will drive decisions. For example, the rights we have in our Constitution should be factors in our According to this theory. Our rights, such as freedom of expression and freedom of religion, should help us decide how to behave. People who do not agree with this theory, believe that the rights of society are too complicated to find out. They say it's too hard to say what most people think is important for society as a whole, so it's a messy idea to make decisions. Societies that don't have written laws like our constitution make this theory less credible, according to some philosophers. VIRTUE The ethical theory of virtue believes that we can judge a person's decisions based on their character and morality. The way someone lives their life can explain any ethical decision according to this theory. For example, a person who finds and traps to get ahead in life probably makes decisions based on advancing their own interests according to the theory of virtue. The biggest hole in this theory is that people can change their moral character, and the theory does not take into account changes in morality. The theory of virtue puts people into boxes based on their reputation at a given time. Consistent ethics These four theories fall into one of two categories. The first, consequent ethics, affirms that results determine ethical decisions. Therefore, the result of a situation makes that decision okay. For example, it's ethical for you to tell him a white lie if he gets what he needs or wants. The theory of utilitarianism falls into this category because the benefit of decisions is the most important factor. Virtue theory can be adapted to consequent ethics because a person's reputation can be based on the consequences of their decisions. Non-consensual ethics Non-consensual ethics is the other side of the coin to consequent ethics. It says that people's decisions that are not in the result, but in the values and beliefs they have profoundly. In unconformed ethics, you will decide a situation based on what you believe. Of what it can happen. For example, it is not in a situation if you believe that honesty is important. The theory of Deontology falls under this type of ethics because people make decisions based on their duty for those around them. Likewise, the theory of rights belongs to this category because the rights that society holds, dear ones are important about any other factor. The virtue could also fit here because people of high moral character can decide in function of their values. More preview of reference.com preview Although the phrase "the theory of the national organization" can lead some people to think about terms of structure or organizational design, the thorner really refers to a decision-making framework. The rational model says that companies are structures designed to achieve specific objectives in logical and predictable ways. Both logic and predictability refer to the decision-making process. According to Richard L. Daft, author of "theory and design of organization", no company can trust the theory of the rational organization for each decision, but the supporters of it resort to rational processes whenever possible. The objectives of the entire company and a specific decision-making process form the nucleus of rational theory. The objectives provide the criteria based on
