Android studio textview set bold. How to set a text in textview in android. How to set font bold in android textview. How to set border on textview in android. How to set textview in android.

You can do programmatically using setTypeface() method: Below is the code for default Typeface textView.setTypeface(null, Typeface.NORMAL); // for Normal Text textView.setTypeface(null, Typeface.BOLD); // for Bold only textView.setTypeface(null, Typeface.ITALIC); // for Italic textView.setTypeface(null, Typeface.BOLD_ITALIC); // for Bold and Italic and if you want to set custom Typeface: textView.setTypeface(textView.getTypeface(), Typeface.NORMAL); // for Normal Text textView.setTypeface(textView.getTypeface(), Typeface.BOLD); // for Bold only textView.setTypeface(textView.getTypeface(), Typeface.ITALIC); // for Italic textView.setTypeface(textView.getTypeface(), Typeface.BOLD_ITALIC); // for Bold and Italic XML: You can set directly in XML file in like this: android:textStyle="normal" android:textStyle="normal|bold" android:textStyle="normal|italic" android:textStyle="bold" android:textStyle="bold|italic" Or you can set your fav font (from assets), for more info see link TextView Bold Text - To set text style of TextView to bold, you can assign textStyle attribute with "bold" in XML layout file or change the text style dynamically in Kotlin file using setTypeface() method. In this tutorial, we will learn both the layout file approach and programmatical(dynamic) approach to change the text style of TextView to BOLD. Change Text Style of TextView to BOLD in XML Layout File textStyle attribute of TextView widget accepts on of these values: "bold", "italic" or "normal". To change the style to bold, you have to assign textStyle with "bold". The syntax to use textStyle attribute is Example Android Application - Bold Text in TextView Let us create an Android application with Kotlin support in Android Studio and change the text style of TextView in XML layout file. activity_main.xml We have used a string resource, and the contents of strings.xml is TextView Tutorial - TutorialKart Hello World! We have got the reference to the TextView in layout file using findViewById() method. Call to setTypeface() method on the TextView reference would set the text color of TextView. MainActivity.kt package com.tutorialkart.textviewtutorial import android.graphics.Typeface import androidx.appcompat.app.AppCompatActivity import android.os.Bundle import android.widget.TextView class MainActivity : AppCompatActivity() { override fun onCreate(savedInstanceState: Bundle?) { super.onCreate(savedInstanceState) setContentView(R.layout.activity_main) var textView = findViewById(R.id.text_view_id) textView.setTypeface(null, Typeface.BOLD) } } Conclusion In this Kotlin Android Tutorial, we learned how to set or change the text/font style of TextView widget to Bold in Android application. You can use this for font create a Class Name TypefaceTextView and extend the TextView private static Map mTypefaces; public TypefaceTextView(final Context context) { this(context, null); } public TypefaceTextView(final Context context, final AttributeSet attrs) { this(context, attrs, 0); } public TypefaceTextView(final Context context, final AttributeSet attrs, defStyle) { super(context, attrs, defStyle); if (mTypefaces == null) { mTypefaces = new HashMap(); } if (this.isEditMode()) { return; } final TypedArray array = context.obtainStyledAttributes(attrs, styleable.TypefaceTextView); if (array != null) { final String typefaceAssetPath = array.getString(R.styleable.TypefaceTextView_customTypeface); if (typefaceAssetPath != null) { Typeface typeface = null; if (mTypefaces.containsKey(typefaceAssetPath)) { typeface = mTypefaces.get(typefaceAssetPath); } else { AssetManager assets = context.getAssets(); typeface = Typeface.createFromAsset(assets, typefaceAssetPath); mTypefaces.put(typefaceAssetPath, typeface); } setTypeface(typeface); } array.recycle(); } } paste the font in the fonts folder created in the asset folder **here pompiere.ttf is the font name** Place the lines in the parent layout in the xml xmlns:app=" xmlns:custom=" Kotlin AndroidApps/ApplicationsMobile Development This example demonstrates how to make a specific text on TextView bold in Android using Kotlin.Step 1 – Create a new project in Android Studio, go to File => New Project and fill all required details to create a new project.Step 2 – Add the following code to res/layout/activity_main.xml Let's try to run your application. I assume you have connected your actual Android Mobile device with your computer. To run the app from android studio, open one of your project's activity files and click the Run icon from the toolbar. Select your mobile device as an option and then check your mobile device which will display your default screen Updated on 18-Aug-2020 11:20:39

29/03/2018 - Left: Single style text. TextView with textSize="32sp" and textStyle="bold". Right: Multi style text. Text with ForegroundColorSpan, StyleSpan(ITALIC), ScaleXSpan(1.5f), StrikethroughSpan ... 18/02/2016 - The second case, which is SourceSansPro, is especially interesting. We've extended the switch statement with two additional cases, which return our new extra light and extra bold fonts: case 10: // extra light, equals @integer/font_style_extra_light return FontCache.getTypeface("SourceSansPro-ExtraLight.ttf", context); case 11: // extra bold ... 12/09/2014 - User57459 posted I am trying to add a red * to a TextView and I also want to bold it. Here is my attempt, TextView businessEmailAddress = rootView.findViewById (Resource.Id.labelBusinessEmailAddress); String EmailLabel = businessEmailAddress.getText(); SpannableStringBuilder builderEmail ... - User132605 posted A little late to the party but I ... android textview字体加粗 Android studio最新水平度和垂直居中, Android中字体加粗 在xml文件中使用 android:textStyle="bold" 但是不能将中文设置成粗体, 将中文设置成粗体的方法是: TextView tv = (TextView)findViewById(R.id.TextView01); TextPaint tp = tv.getPaint(); tp.setFakeBoldText(true); 10/06/2021 - Output: 5. Text Shadow. Shadow for the text can also be given in Android. The attributes required for the shadowed text view are: android:shadowDx="integer_value"-> which decides the distance of text from its shadow with respect to x axis, if the integer_value is positive the shadow is on positive of the x axis and vice versa. android:shadowDy="integer_value" -> ... This is the way to set the font programmatically: TextView tv = (TextView) findViewById (R.id.apiname); Typeface face = Typeface.createFromAsset (getAssets (), "fonts/epimodem.ttf"); tv.setTypeface (face); put the font file in your assets folder. In my case I ... 12/09/2014 - User57459 posted I am trying to add a red * to a TextView and I also want to bold it. Here is my attempt, TextView businessEmailAddress = rootView.findViewById (Resource.Id.labelBusinessEmailAddress); String EmailLabel = businessEmailAdress.getText(); SpannableStringBuilder builderEmail ... - User132605 posted A little late to the party but I ... BaseColumns; CalendarContract.AttendeesColumns; CalendarContract.CalendarAlertsColumns; CalendarContract.CalendarCacheColumns; CalendarContract.CalendarColumns 02/08/2019 - This example demonstrates how do I make a specific text on TextView bold in android. Step 1 – Create a new project in Android Studio, go to File => New Project and fill all required details to create a new project. Step 2 – Add the following code to res/layout/activity_main.xml. Let's try to run your application. And in the java code of your Activity you do this: TextView textViewTitle = (TextView) findViewById (R.id.text_view_title); textViewTitle.setTextAppearance (this, R.style.RedHUGEText); It worked for me! And it applied color, size, gravity, etc. I've used it on handsets and tablets with Android API Levels from 8 to 17 with no problems. And in the java code of your Activity you do this: TextView textViewTitle = (TextView) findViewById (R.id.text_view_title); textViewTitle.setTextAppearance (this, R.style.RedHUGEText); It worked for me! And it applied color, size, gravity, etc. I've used it on handsets and tablets with Android API Levels from 8 to 17 with no problems. In android, TextView is a user interface control that is used to set and display the text to the user based on our requirements. The TextView control will act as like label control and it won't allow users to edit the text. In android, we can create a TextView control in two ways either in XML layout file or create it in Activity file programmatically. Just build your String in HTML and set it: String sourceString = "" + id + " " + name; mytextView.setText (Html.fromHtml (sourceString)); First: You don't need to worry about using the slow performance code from the Raghav Sood's answer. Second: You don't need to write an extension function provided by w3bshark's answer when using Kotlin. <code></code></p>
