OBJECTIVE TYPE QUESTIONS

Choose correct or the best alternative in the following:

Q1 What is the output of the following program?

```

main ( )
{
    int x = 2, y = 5;
    if (x < y) return (x + x*y);
    else printf ("21");
    printf ("22");
}

```

- (A) 21
(B) 212
(C) Compilation error
(D) None of these

Ans: D

There is no compilation error but there will no output because function is returning a value and if statement is true in this case.

Q2 Choose the correct one

- (A) Address operator can not be applied to register variables
(B) Address operator can be applied to register variables
(C) Use of register declaration will increase the execution time
(D) None of the above

Ans: D

A register access is much faster than a memory access, keeping the frequently accessed variables in the register will lead to faster execution of programs

Q4 What is the output of the following program?

```

main ( )
{
    extern int x;
    x = 20;
    printf ("%d", x);
}

```

- (A) 0
(B) 20
(C) error
(D) garbage value

Ans: C

Output of the given program will be "Linker error-undefined symbol x". External variables are declared outside a function.

Q5 If x is one dimensional array, then pick up the correct answer

1

- Which of the ff. is correct statement about the JAVASCRIPT?
 - Javascript is used only for web apps
 - You can use Javascript to create interactive web elements
 - Javascript is a server-side only language
 - all of these
- Which letter shows how to insert a javascript code in HTML?
 - <style type="text/javascript"></style>
 - <script type="text/javascript"></script>
 - <script type="text/JS"></script>
 - all of these
- Which of the following can't be done with client-side JavaScript?
 - Validating a form
 - Sending a form's contents by email
 - Storing the form's contents to a database file on the server
 - None of the above

Ans: C
- Which of the following are capabilities of functions in JavaScript?
 - Return a value
 - Accept parameters and Return a value
 - Accept parameters
 - None of the above

Ans: C
- Which of the following is not a valid JavaScript variable name?
 - 2names
 - _first_and_last_names
 - FirstAndLast
 - None of the above

Ans: A
- _____ tag is an extension to HTML that can enclose any number of JavaScript statements.
 - <SCRIPT>
 - <BODY>
 - <HEAD>
 - <TITLE>

Ans: A
- How does JavaScript store dates in a date object?
 - The number of milliseconds since January 1st, 1970
 - The number of days since January 1st, 1900
 - The number of seconds since Netscape's public stock offering.

Question: 1. Which of the following statement about functions of false? (A) A function can call itself. (B) A function can appear in the formal argument list. (C) Constants can appear in a program unit. (D) More than one function is allowed in a program unit. 23. How is search done in #include and #include "somelibrary.h" according to C standard? a) When former is used, current directory is searched and when latter is used, standard directory is searched. b) When former is used, standard directory is searched and when latter is used, current directory is searched. Workspace. Answer: (d) -32768 to 32767. Explanation: In a 16-bit C compiler, we have 2 bytes to store the value. The range for signed integers is -32768 to 32767. The range for unsigned integers is 0 to 65535. The range for unsigned character is 0 to 255. 2) Study the following program: main () {printf ("jvatpoint"); a variable name can start with a ____ , prototype of a function means ____ . C Proramming MCQ : C is still the popular programming language and is favorite topics to test knowledge of a candidate on knowledge of programming concept. Please find the selected list of important mcq questions on C Programming Language with answer.
