If you are synchronized with chrome, synchronization will be suspended after the head of the chrome view. Related web browser sources with Android phone can be filled with lots of data, including files you don't have to store.

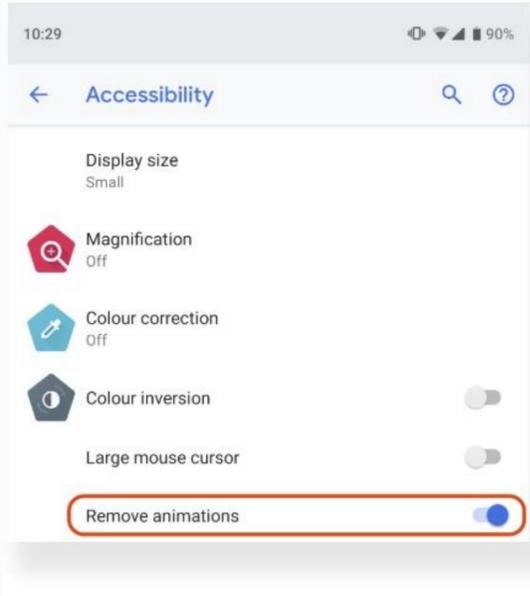

Many of this data - you are using GoogleFirefox or Samsung Internet - stored as part of cookies and cache. This data can be useful for websites that visit random data tractors. Some cookies track your browsing history and can help offer you personalized ads based on your web history, e.g. B. when you see an ad for a product that you briefly viewed on a shopping page. That's why it's good to clear the cache from time to time. This allows you to delete unnecessary data on your phone, especially if your phone's cookies contain unknown tracking data. The reference cache is a bit cumbersome: you need to access some of your favorite sites, but it's a small price to pay to ensure your phone isn't cluttered with someone else's data. The steps vary slightly depending on the phone type and web browser application you are using. Here's how to clear this data in the Google Chrome browser (often the default on many Android phones like the Google Pixel Line), the Samsung internet browser (often the default on the Galaxy phone series), and Mozilla NAVIGATORFIREFOX. You can also refer to our separate guide on clearing iPhone web browser cache if you need to clear multiple Apple devices as well.

Remove navigation data menu for Chrome Android. Delete navigation data. You can also access Chrome settings menu, touch Privacy & security, then Clear navigation data. Chrome also offers basic and advanced cleaning options.Browsing history, cookies, and data, as well as website images and cached files. You can use a drip interval to select if you want to remove your entire timeline or select anywhere from the last 24 hours to the last four weeks. When you tap Advanced, you'll also have access to clearing saved passwords, automatic compilation data, and site settings. After selecting what you want to delete, tap the Cancel Data button. You may receive additional messages if Chrome is considering some "important" pages for you, in which case you'll have the option to confirm them before cleaning them up. Otherwise, if you don't get this message, Chrome will clean up immediately as instructed. To learn more: "He leaves Google Chrome and this privacy browser instead of relying on the Internet," delete data "and" clear the cache "for Samsung Internet." Screenshot by Mike Sorrentino/CNET There are two different ways to delete data in Samsung's web browser and cookie data. You can remove from the browser itself or go through the phone settings. To clear, when you are in the Samsung Internet Browser application, first tap the option button in the lower right corner represented by the three horizontal lines and then settings; Scroll down and tap Personal data, and then tap clear navigation data to bring up a menu of options that should be deleted. In any combination, you can remove browsing history, cookies and website data, images and files stored in the cache, passwords and automatic modules. After clicking delete, you will be asked to confirm the option before shutting down. Going through the browser application itself gives you maximum customization for what you want to remove. However, if you want to access similar options in the Phone settings menu, open the Settings app and tap the app, scroll down and tap Samsung Internet, then save. At the bottom of the repository, get separate options for wipe cache, wipe cache, and wipe data. Click on cancel cacheEmpty the cache, but the data show a quick notice that all app data will be definitively deleted, including files, settings, accounts and databases. Although cookies are not specified, this "basic" method should destroy all the remaining data so that you can restart the Samsung web browser as if it were brand new. Further information: Change these Android settings to get the most out of your Mozilla Firefox phone similarly to Google Chrome, you can empty the cache in the Android Mozilla Firefox app. To access this function, press the other button to the right of the addresses bar, which in turn is symbolized by three points aligned vertically.

Then it's up to settings and scroll down to cancel navigation data.

Delete the navigation data menu in Mozilla Firefox on Android. Mike Sorrentino/CNET screenshot of the three browsers reviewed here, Firefox offers most of the options in the navigation data menu, so you can also delete all the cards currently open, the navigation chronology and the website data, the site authorizations Web and even your downloads - Folders together with cookies and images and files stored in the cache. Although it is not possible to choose a period of time like Chrome, you can be more specific on the type of data you want to delete. Further information: Change the privacy settings of your browser in Firefox, Chrome and Safari as soon as possible and Firefox has an additional option for those who never want to save navigation data when they have finished using an app. There is an option, delete navigation data at the exit in settings that tells Firefox to delete any combination of the same settings every time you leave the app. This is a useful function if you want to keep your browser clean and, for example, you don't want to accidentally share your navigation history with someone who has stolen or gained access to your phone.
